Completing the installation of SCID-2, the researchers made sure to make a note of any pre-existing programs or other softwares that were installed on the computer before the installation. SCID-2 requires an Internet connection and the Internet connection cannot be disconnected while the program is running. However, while using the software, the participants can pause the program and make a fresh installation, if needed. A sound and, uh, note were also gathered from the system at the start of the test and at the end. They were then analyzed to see how SCID-2's impact was. The researchers concluded that SCID-2 could provide a complete solution to these issues. To ensure that all future programs worked correctly and that system errors could be fixed, as well as the security settings, the researchers created a restore point on the system before installing SCID-2. After all the work had been completed, the participants checked to see if there was any damage or additional problems that SCID-2 had created. If there was, the researchers used the methods to undo it. The purpose of Data Quality Assessment (DQA) is to analyze data for quality. DQA is used to assess the accuracy of data and to check if any inconsistencies exist in it. The main purpose of DQA is to improve the quality of the data to ensure that you are saving the most accurate data for each variable. DQA helps to ensure that the data is accurate and free of errors. This is usually done by carrying out a questionnaire. A questionnaire is usually used to obtain a few key indicators of data quality and the reliability of the data. Questions will be asked in different areas and can include things like "how likely is it that this information is accurate?", "what information is missing?", "how reliable is this information?", "is the data consistent?" and "are there any inconsistencies?". As DQA is concerned with data quality, it will also check the completeness of the data. This means that DQA will be able to tell if the data is missing or incomplete. The main purpose of a DQA
