Tamai, T. Koyama, T. Tamai.Q: How to replace line breaks in string in Java? I want to remove the line breaks in a string. This means that when he wrote by a new line The result should be he wrote by a new line How do I do this? A: I am assuming this is a line of text in a file. public class Solution { public static void main(String[] args) { String input = "he wrote by " + "a new line"; String line = input.replace(" ", ""); System.out.println(line); } } From the comments: The problem is that strings are immutable, so replacing the " " in the string will replace all the lines, and I need to replace it only in the first line. My initial thought was that this could be done using a regex, but there is an easier way. Replace the with the empty string. public class Solution { public static void main(String[] args) { String input = "he wrote by " + "a new line"; String line = input.replace(" ", ""); System.out.println(line); } } When I'm at the gym, as long as I can find a treadmill, there's a good chance I'm going to be in front of the elliptical. I like this machine, as I can control the speed and incline and the TV sits in a comfortable upright position. It's also relatively inexpensive, so when a friend of mine is staying at my house, I'll often pick up an elliptical for him. He's a runner, so 2d92ce491b
